

Creating Favorites in Allscripts ePrescribe

Most electronic health record (EHR) systems allow health care professionals to save their frequently used prescriptions as Favorites. Saving a product as a Favorite in the EHR enables quicker access to frequently written prescriptions, similar to bookmarking a favorite website. Using Favorites in the EHR can also assist health care providers in ensuring that appropriate dosing, prescription quantities, and accurate patient instructions are consistently included in the ePrescription. This Guide does not guarantee insurance coverage and families should refer to their individual health plan.

This Guide provides a high-level overview of how to create Favorites within Allscripts ePrescribe, was created based on Allscripts ePrescribe version 20.1.4.184, and should not replace detailed instructions provided by your internal or external EHR support resources. Features and their locations may change as new software versions are released. Additionally, please note that not every step is included in this EHR Guide, and there may be alternative approaches.

Favorites

The Allscripts ePrescribe system does not have the capability to save prescriptions as favorites, however, Allscripts ePrescribe saves a list of the most frequently written prescriptions, which offers similar benefits to favorites.

The following describes the process for prescribing **EndeavorRx** from the most frequently prescribed list (called **My History** in Allscripts ePrescribe):

- 1 Select the **My History** radio button, enter **EndeavorRx** in the **Search** textbox

The screenshot shows the Allscripts ePrescribe interface. At the top, there is a search bar with "EndeavorRx" entered and a "Search" button. Below the search bar, there are radio buttons for "Patient History", "MyHistory", and "All Meds". The "MyHistory" radio button is selected. To the right of the search bar is a "Write Free Form Rx" button. Below the search bar, there is a "Coverage:" field and a "Patient Options" button. At the bottom left, there are "Back" and "Select Sig" buttons. The main part of the screenshot is a table with the following columns: Drug Name, Strength, Unit, Dosage Form, and Route. The table contains three rows, with the first row showing "EndeavorRx" in the Drug Name column.

	Drug Name	Strength	Unit	Dosage Form	Route
<input type="radio"/>	EndeavorRx				
<input type="radio"/>					
<input type="radio"/>

3 Edit the prescription, if needed, then select **Add to Script Pad**

Indication & Safety Information:

The EndeavorRx app is a digital treatment indicated to improve attention function as measured by computer-based testing in children ages 8-12 years old with primarily inattentive or combined-type ADHD. Patients who engage with EndeavorRx may not display benefits in typical behavioral symptoms, such as hyperactivity. EndeavorRx should be considered as part of a therapeutic program and is not a substitute for ADHD medication. The most common side effects observed in children in EndeavorRx clinical trials was a feeling of frustration, as the game can be quite challenging at times. No serious adverse events were observed with its use.
